

Question - Set A:

Design the necessary class with the necessary properties to generate the output below for the given driver code.

Driver Code	Output
<pre>public class FIFA_recordTester { public static void main(String[] args) { FIFA_record t1 = new FIFA_record("Argentina", 18, 3); FIFA_record t2 = new FIFA_record("England"); FIFA_record t3 = new FIFA_record("France", 2); System.out.println("1====="); t1.showDetails(); System.out.println("2====="); System.out.println(t1.record(2022)); System.out.println(t2.record(t1,1986)); System.out.println(t1.record(1978)); System.out.println("3====="); t1.showDetails(); System.out.println("4====="); System.out.println(t2.record(1966)); System.out.println(t2.record(2018)); System.out.println("5====="); t2.showDetails(); System.out.println("6====="); System.out.println(t3.record(1998)); System.out.println(t3.record(t1,2026)); System.out.println(t3.record(2018)); System.out.println("7====="); t3.showDetails(); } }</pre>	<pre>Argentina participated in the FIFA World Cup 18 times England participated in the FIFA World Cup many time France participated in the FIFA World Cup many time 1=====</pre> Team name: Argentina Argentina win FIFA world cup :0 time <pre>2=====</pre> record updated successfully for Argentina record updated successfully for Argentina record updated successfully for Argentina <pre>3=====</pre> Team name: Argentina Argentina win FIFA world cup :3 time winning year: 2022 1986 1978 <pre>4=====</pre> record updated successfully for England Cannot add another winning year for England. <pre>5=====</pre> Team name: England England win FIFA world cup :1 time winning year: 1966 <pre>6=====</pre> record updated successfully for France Cannot add another winning year for Argentina record updated successfully for France <pre>7=====</pre> Team name: France France win FIFA world cup :2 time winning year: 1998 2018

Question - Set B:

Design the necessary class with the necessary properties to generate the output below for the given driver code.

Driver Code	Output
<pre>public class GoldenBootTester { public static void main(String[] args) { GoldenBoot p1 = new GoldenBoot("Lionel Messi", 5, 3); GoldenBoot p2 = new GoldenBoot("Harry Kane",1); GoldenBoot p3 = new GoldenBoot("Luka Modric"); System.out.println("1====="); p1.showDetails(); System.out.println("2====="); System.out.println(p2.record(p1,2014)); System.out.println(p1.record(2022)); System.out.println(p2.record(p1,2026)); System.out.println("3====="); p1.showDetails(); System.out.println("4====="); System.out.println(p2.record(2018)); System.out.println(p2.record(p3,2010)); System.out.println("5====="); p2.showDetails(); System.out.println("6====="); System.out.println(p3.record(2006)); System.out.println(p3.record(p2,2002)); System.out.println("7====="); p3.showDetails(); } }</pre>	Lionel Messi participated in the FIFA World Cup 5 times. Harry Kane participated in the FIFA World Cup many times. Luka Modric participated in the FIFA World Cup many times. 1===== Player Name: Lionel Messi Total Golden Boot 0 2===== Record updated successfully for Lionel Messi. Record updated successfully for Lionel Messi. Record updated successfully for Lionel Messi. 3===== Player Name: Lionel Messi Total Golden Boot 3 Winning Years: 2014 2022 2026 4===== Record updated successfully for Harry Kane. Record updated successfully for Luka Modric. 5===== Player Name: Harry Kane Total Golden Boot 1 Winning Years: 2018 6===== Can't add another golden boot for Luka Modric. Can't add another golden boot for Harry Kan. 7===== Player Name: Luka Modric Total Golden Boot 1 Winning Years: 2010

SET A	SET B
<pre> public class FIFA_record{ public String name; public int [] wining_year; public int count; public FIFA_record(String name, int p, int n){ this.name=name; this.wining_year=new int[n]; System.out.println(name+" participated in the FIFA World Cup "+p+" times"); } public FIFA_record(String name){ this.name=name; this.wining_year=new int[1]; System.out.println(name+" participated in the FIFA World Cup many time"); } public FIFA_record(String name, int n){ this.name=name; this.wining_year=new int[n]; System.out.println(name+" participated in the FIFA World Cup many time"); } public String record(int y){ if(count<wining_year.length){ wining_year[count]=y; count++; return"record updated successfully for"+name; } else{ return"Cannot add another winning year for "+name; } } public String record(FIFA_record obj,int z){ return(obj.record(z)); } public void showDetails(){ System.out.println("Team name: "+name); System.out.println(name+" win FIFA world cup :"+count+" time"); if(count!=0){ System.out.println("winning year:"); for(int i=0;i<count;i++){ System.out.println(wining_year[i]); } } } } </pre>	<pre> public class GoldenBoot { public String playerName; public int[] winningYear; public int count; public GoldenBoot(String playerName, int t, int n) { this.playerName = playerName; this.winningYear = new int[n]; System.out.println(playerName +" participated in the FIFA World Cup "+ t + " times."); } public GoldenBoot(String playerName) { this.playerName = playerName; this.winningYear = new int[1]; System.out.println(playerName + " participated in the FIFA World Cup many time."); } public GoldenBoot(String playerName, int n) { this.playerName = playerName; this.winningYear = new int[n]; System.out.println(playerName +" participated in the FIFA World Cup many times."); } public String record(int year) { if (count < winningYear.length) { winningYear[count] = year; count++; return "Record updated successfully for"+playerName; } else { return "Can't add another golden boot for"+playerName; } } public String record(GoldenBoot obj, int year) { return obj.record(year); } public void showDetails() { System.out.println("Player Name: " + playerName); System.out.println("Total Golden Boot " + count); if (count != 0) { System.out.println("Winning Years:"); for (int i = 0; i < count; i++) { System.out.println(winningYear[i]); } } } } </pre>

Rubric of Set A and Set B

Points	Marks
Class declaration and three instance variables	1
Constructor overloading [3 Marks] 1) 3 times properly constructor declaration with parameter 2) Properly updating the variables 3) Print statement	1.5 1 0.5
record() method [3.5 Marks] 1) 2 times properly method declaration with proper return type 2) return statement 3) handle record(obj,int) overloading 4) condition checking and store record	1 0.5 0.5 1+0.5
showInfo() / details() method	2.5
Total	10
