-------	-----	----------

Design a class called Book and LibraryUser with the necessary properties so that the following driver code produces the given output. The instance variables in Book class must be private.

Tester Code	Expected Output
<pre> public class LibraryTester { public static void main(String[] args) { LibraryUser userA = new LibraryUser("Imran"); System.out.println("=====1====="); LibraryUser userB = new LibraryUser("Tania", 3); Book b1 = new Book("Java Basics", "Author1"); Book b2 = new Book("Data Structures", "Author2"); Book b3 = new Book("Algorithms", "Author3"); System.out.println("=====2====="); userA.borrowBook(b1); System.out.println("=====3====="); userA.borrowBook(b2, b3); System.out.println("=====4====="); userA.showBorrowedBooks(); System.out.println("=====5====="); userA.returnBook("Java Basics"); System.out.println("=====6====="); userA.showBorrowedBooks(); System.out.println("=====7====="); userA.returnBook("Python"); System.out.println("=====8====="); userA.returnBook("Data Structures"); userA.returnBook("Algorithms"); userA.showBorrowedBooks(); System.out.println("=====9====="); userB.showBorrowedBooks(); } } </pre>	<pre> Welcome Imran to Library =====1===== Welcome Tania to Library =====2===== Imran borrowed Java Basics. =====3===== Imran borrowed Data Structures. Borrow limit reached! =====4===== User Name: Imran Maximum Borrow Limit: 2 Total Borrowed: 2 Books: Java Basics Data Structures =====5===== Java Basics returned successfully. =====6===== User Name: Imran Maximum Borrow Limit: 2 Total Borrowed: 1 Books: Data Structures =====7===== Python not found in borrowed list. =====8===== Data Structures not found in borrowed list. Algorithms returned successfully. User Name: Imran Maximum Borrow Limit: 2 Total Borrowed: 0 Books: =====9===== User Name: Tania Maximum Borrow Limit: 3 Total Borrowed: 0 Books: </pre>
